

Features added to Troy Vision V3.0.48

Alert Display

The alert display has been changed so that the date and time of the alert are now shown as seen in *figure 1* below.

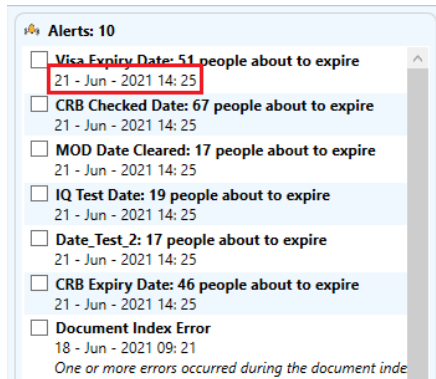

Figure 1 – Alerts now show date and time

CV Parsing

A new setting has been introduced within CV scanning which allows the user to exclude the qualification and language summary from being inserted into the note of the newly created candidate. By default, this option is switched off.

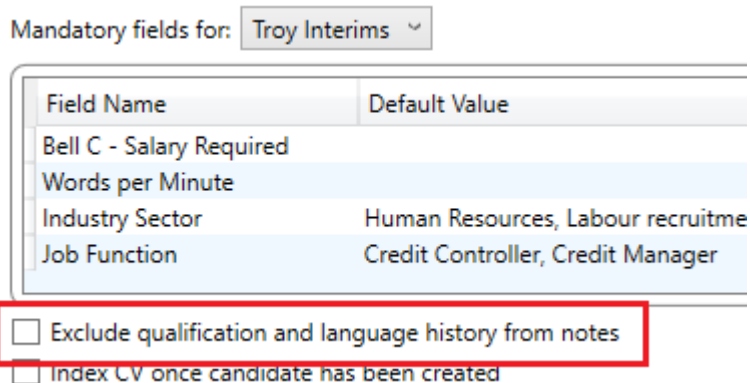

Figure 2 – new exclude setting for cv parsing

Features added to Troy Vision V3.0.48

Overdue Tasks

A new personal setting has been introduced which allows you to configure how often you are reminded about overdue tasks. In previous versions Troy would display the overdue task window every 5 minutes.

You now have the ability to increase the warning period up to 4 hours or to stop being reminded. The overdue tasks will still display when Troy is started unless you have chosen not to be reminded.

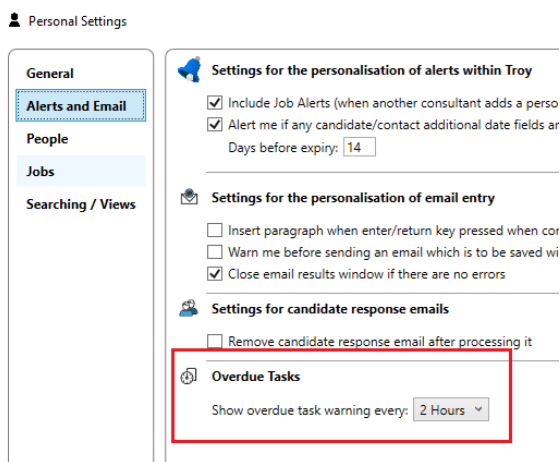

Figure 3 – Overdue tasks configured to be shown every 2 hours

Other

The *Type of Work* field can now be selected as a field within a view when viewing a list of candidates within the candidate / contact page, or the list of candidates within a job.
