

Features added to Troy Vision V3.0.58.0

Company Page

The locations expander within the company page has been enhanced so that a snippet of the company note is displayed alongside the company's other locations.

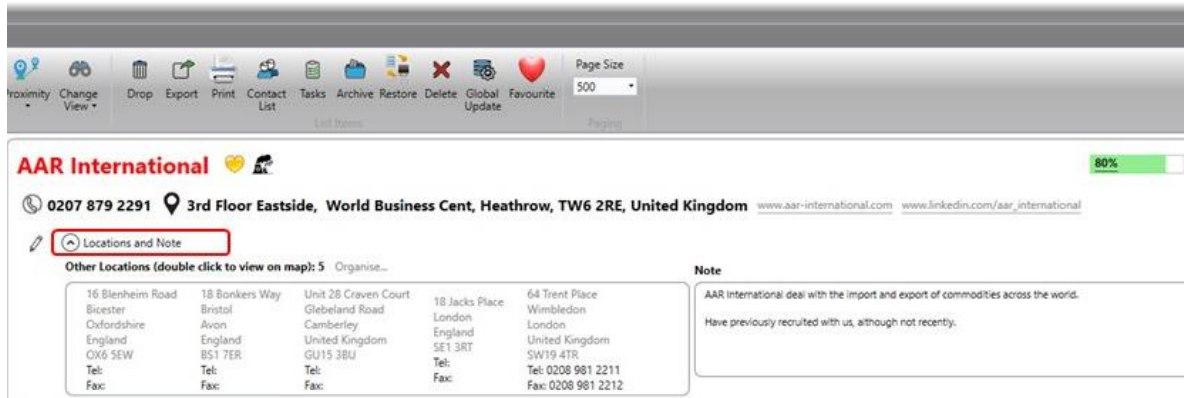

Figure 1, Company locations and note snippet expanded

The panel will now remain expanded when working through the list of companies, where previously it would contract.

Double clicking upon the note snippet will allow you to edit it.

Candidate Progress

It is now possible to use a shifted left click to tick multiple items within the list of jobs, companies and stored lists shown within this tab.

When drilling down to a list of companies from the companies considered, it is now possible to reflect any dropped companies from the company list into the candidate's considered list. To do this double click on a company or choose 'view companies' from the right mouse click option, and then drop companies from the resultant companies page. When you exit the page, you will be asked if you wish to remove the dropped companies from the candidate's Companies Considered list as well.

Other

Various enhancements to improve speed and stability.
