

Features added to Troy Vision V3.0.65.0

Candidate Job Alerts

Placing a candidate or putting a candidate onto a contract will now disable the job alert for the candidate.

From this version onwards, when candidate job alerts are sent, any candidates that are **Placed** or at **On Contract** status will be ignored.

Email

The user is now able to record an email in history without actually sending the email. *Fig 1*, shows the new check box which will facilitate this.

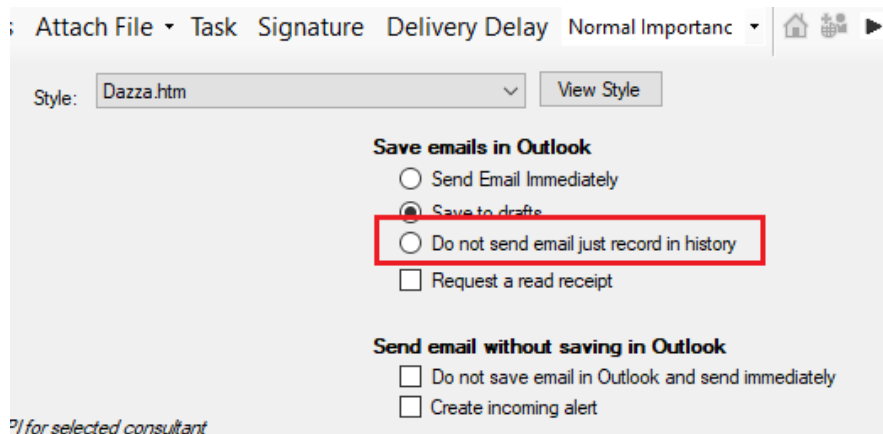

Figure 1, recording email within Troy history

This feature can be used in conjunction with another new feature that allows you to edit the email before sending it. To do this, right mouse click on the email within the Troy history and choose 'Edit' from the resultant menu. The email window will appear, but the Send button will be replaced by a Save button. You can now change the email body and subject. Clicking the Save button will save the changes. Another user can now double click and send the changed email.

Favourites

You can now favourite an item by pressing the Ctrl+F key combination and unfavourite by pressing Ctrl+U.

Ticking an item

Within the main lists of candidate / contacts, companies, jobs and contracts it is now possible to tick an item by pressing the Ctrl+M key combination. If you wish to untick an item, press the Ctrl+M key combination again.

Features added to Troy Vision V3.0.65.0

Other

The Contract End Date is now shown within the list of timesheets within the Timesheet window.

The editing of a contact no longer changes the default GDPR entry credentials. These will now only be changed when adding candidates or contacts. This cures a problem whereby editing a contact and unsubscribing them, would set any new candidates to Unsubscribed by default.

When creating a candidate interview confirmation, the history event is now also recorded against the job.
