

Features added to Troy Vision V3.0.78.0

Interview List

The interview list view now shows the candidate status and allows the user to ignore placed candidates from the report. There is also an option for 'all consultants' within the consultant / team drop-down box.

023 151 to 20/10/2023 115
date Ignore placed candidates Show Interviews

Features added to Troy Vision V3.0.78.0

ChatGPT – Ad hoc emails

Consultants are now able to save their own instructions to use again when creating ad hoc emails.

Figure 3 – New ChatGPT ad hoc email window

To save the instruction, simply enter a description for it and then click the **Save Instruction** button. Any previously saved instructions will appear in a drop box at the top of the window. You can also remove and overwrite an instruction, by selecting the instruction from the drop box, and then ticking the overwrite box before saving; clicking the remove instruction box will remove the selected instruction.

Consultant instructions can also be maintained within the ChatGPT instruction maintenance window by ticking the **View Consultant Email Instructions** checkbox.

Features added to Troy Vision V3.0.78.0

ChatGPT – Job Profiles

It is now possible to merge a ChatGPT job profile into a selected document, enabling it to be branded, rather than just putting it in a blank document.

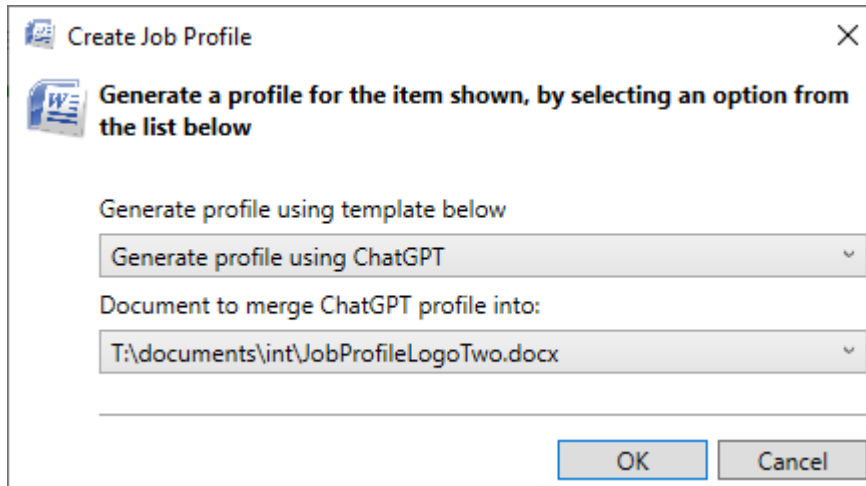

Figure 4 – Select a document into which a ChatGPT generated profile is merged into

To configure the documents which appear in the drop box, go to the Letter Template configuration window.

Features added to Troy Vision V3.0.78.0

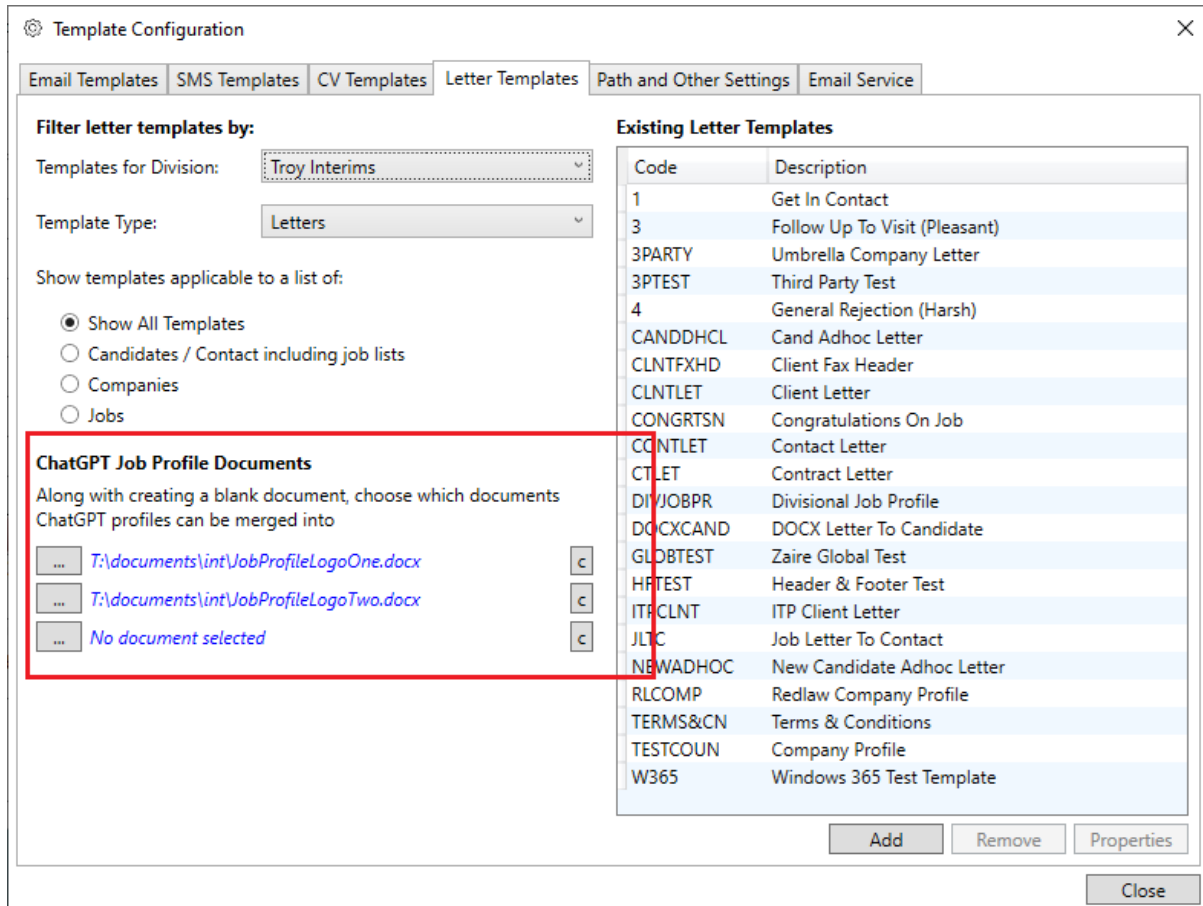

Figure 5 – Choose documents to use for ChatGPT generated job profiles

Simply click the '...' button to select a document to use, mindful that it must be visible to all users, so it is recommended you store these on the Troy documents drive which is typically the **T:** drive.

There are also two new XML tags for Location and Salary which can be included when instructing ChatGPT to create profile text.

Features added to Troy Vision V3.0.78.0

Candidate Creation

A new setting has been introduced which will not allow a candidate to be created if it has been matched during the duplication check process on the mobile number or email address. The default for this new setting is off, but if you wish to switch it on tick the box shown in *Figure 6* below within the Creation settings for people.

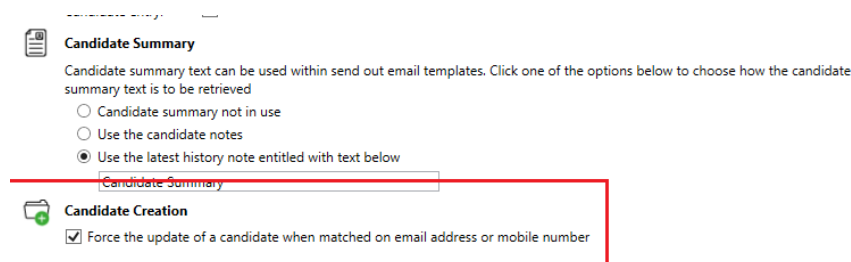

Figure 6 – Force the update of a new candidate if matched on email or mobile number

If a candidate has been matched on the mobile or email address during the duplication check process, the **Create** button will be disabled and you will see a message in red explaining that the candidate must be updated and not created.

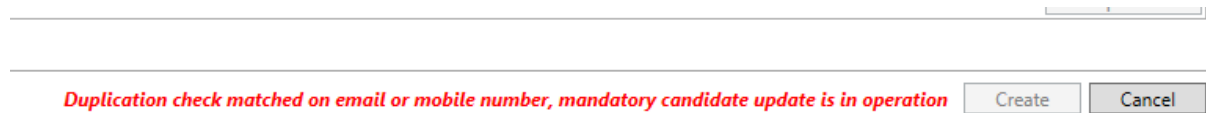

Figure 7 – Bottom of the candidate creation window with the option switched on

Other

When exporting timesheets, an 'x' is placed in the first column to represent the Holiday Entitlement icon.

A new **Store All** feature has been added to the Troy message centre which will attempt to store all unidentified SMS messages, rather than store each one individually.

It is now possible to step through history records from the history properties window, by clicking upon the **Next** and **Previous** buttons.
